Professor Timothy B. Rowe

Professor Timothy B. Rowe is the J. Nalle Gregory Regents Professor of Geology at The University of Texas at Austin and Director of the Vertebrate Paleontology Laboratory of the Texas Memorial Museum. He received his Ph.D. from the University of California at Berkeley and was a Fellow at the Smithsonian Institution before joining UT's faculty in 1986. Rowe has pioneered the use of both multimedia and new X-ray scanning technology for teaching and research in paleontology. The main subject areas of his research include the evolution and anatomical structure of reptiles, birds, and mammals. His publications include 30 scientific articles, six CD-ROMS, and the 1997 book The Mistaken Extinction - Dinosaur Evolution and the Origin of Birds (co-authored with Lowell Dingus). His most recent article is At the roots of the mammalian tree, published this year in the journal Nature. In recognition of his work, Rowe has received a Presidential Young Investigator Award from the National Science Foundation, as well as several awards for teaching excellence from the University of Texas.
