Atlas of the Human Footprint

83% of world's land surface under human influence

www.wcs.org/sw-high_tech_tools/landscapeecology/humanfootprint

The Human Footprint Report

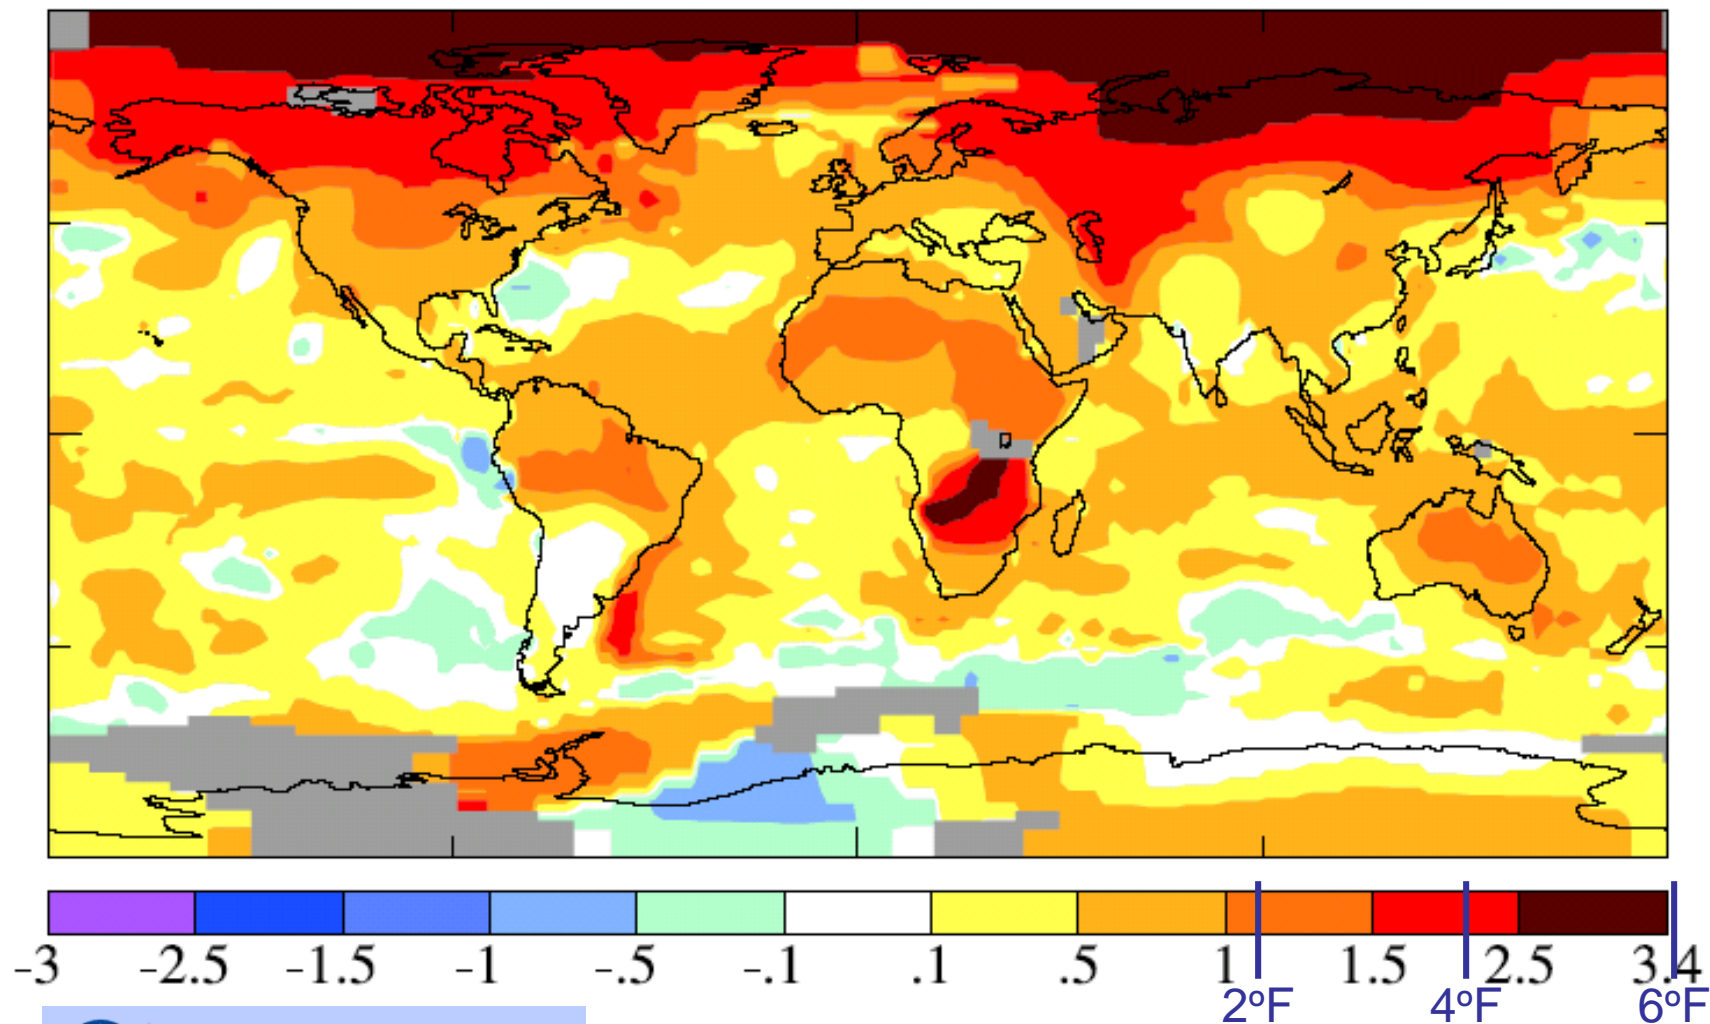

“The global extent of the human footprint suggests that humans are stewards of nature, whether we like it or not. The long-term impact of human influence, positive or negative, benign or catastrophic, depends on our willingness to shoulder responsibility for our stewardship.”

The Human Footprint / Atmosphere

Global Distribution of Atmospheric Carbon Dioxide

New Science?

1990: First IPCC report concludes there is a causal relationship between human activities and global warming.

1988: James Hansen, a leading NASA scientist, told a U.S. Senate subcommittee he was “99% certain” that global warming was occurring and that it was linked to fossil fuel combustion.

1958: Charles Keeling began keeping CO² records on the peak of Mauna Loa in Hawaii (more on this in a moment).

New Science?

1938: Guy Callendar, meteorologist, first to claim evidence of global warming.

1896: Svante Arrhenius, Nobel chemist, makes first quantitative attempt to measure effect of atmospheric CO² on global temperatures.

1860: John Tyndall, scientist, measures absorption of light spectra by CO² and attributes ice ages to changes in atmospheric gas concentration.

1827: Charles Fourier, mathematician, coins the term "greenhouse effect."

Mauna Loa Hawaii

Not Enough Data?

Charles Keeling
1928 – 2005

Charles David Keeling's measurements of the global accumulation of carbon dioxide in the atmosphere set the stage for today's profound concerns about climate change. They are the single most important environmental data set taken in the 20th century.

What is an Ecological Footprint?

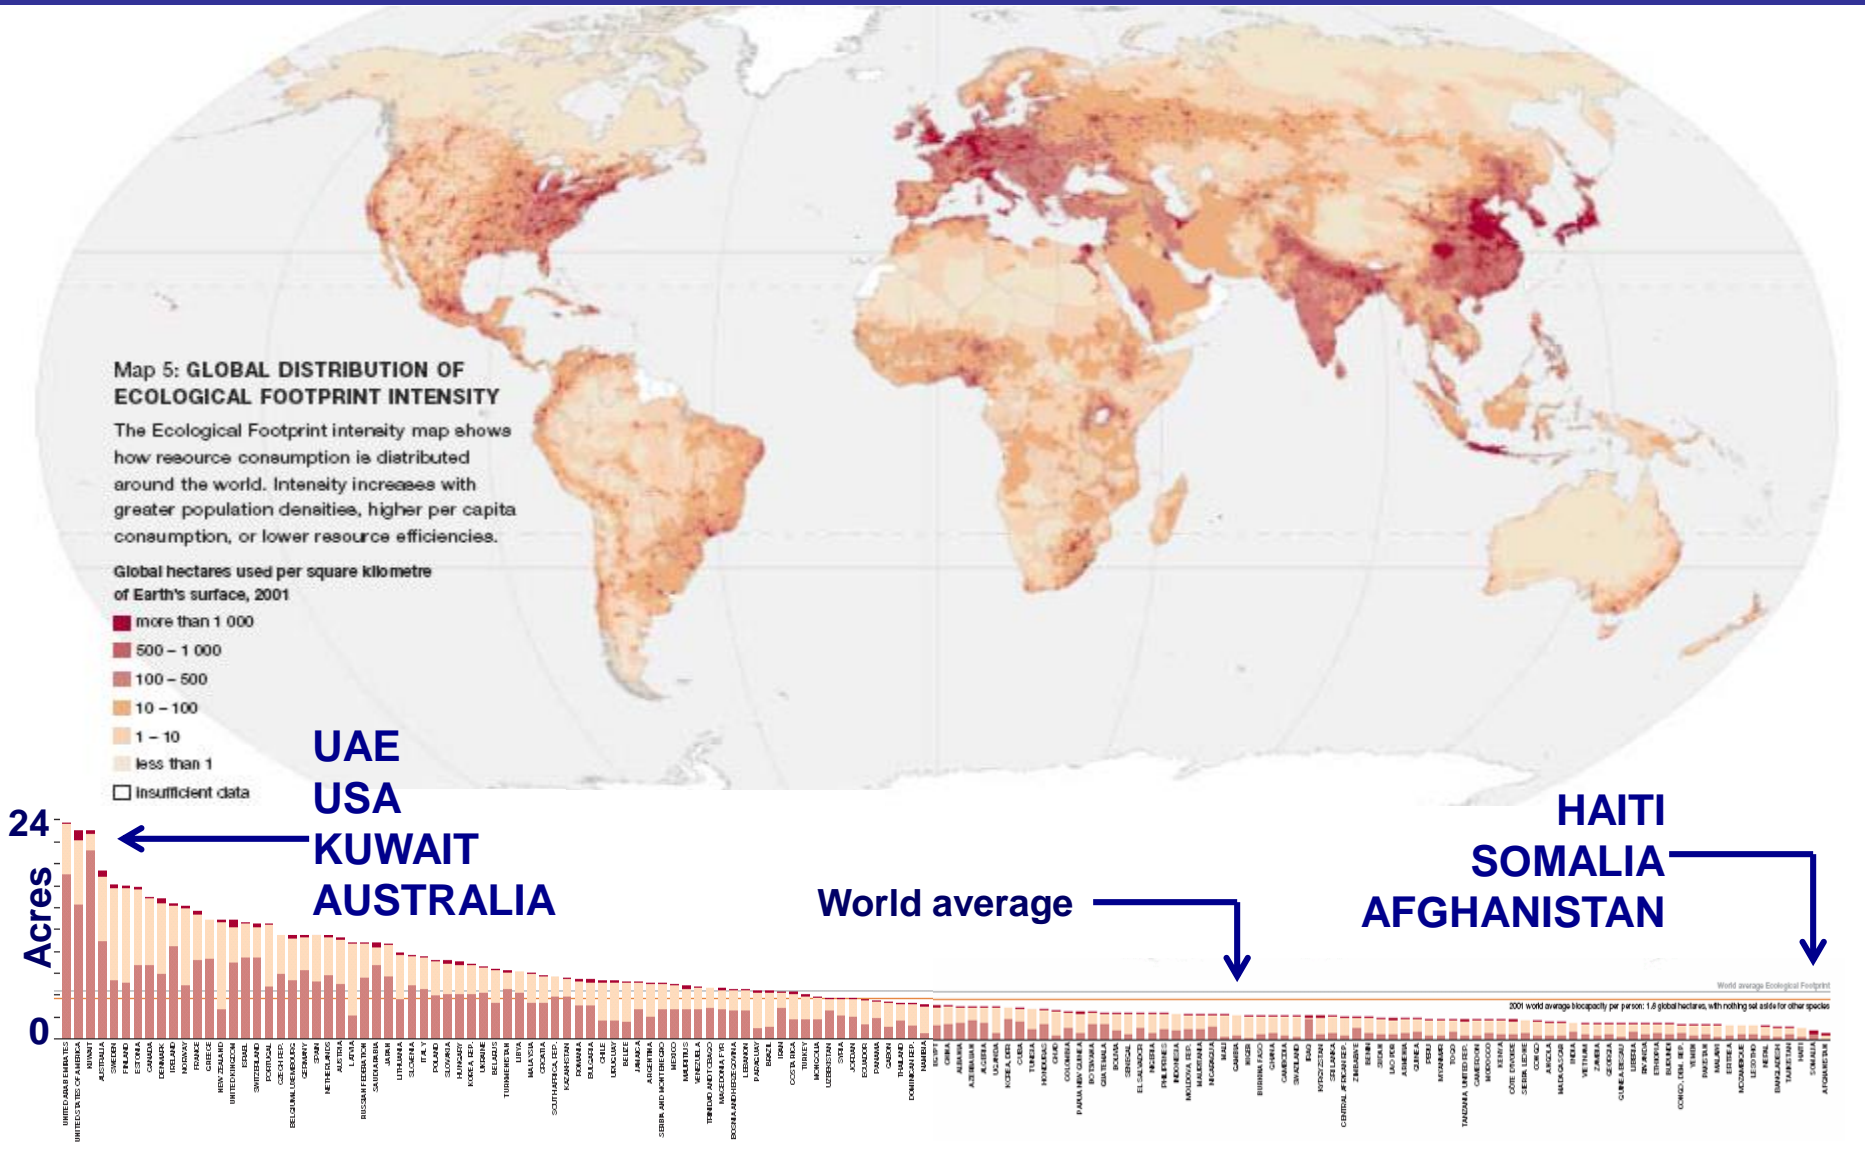

- The total area of productive land and sea
- required to provide the resources for,
- and assimilate wastes of,
- a defined population (e.g., a nation)
- at a particular level of consumption (lifestyle).

Mueller Airport Redevelopment

MUELLER GREEN RESOURCES GUIDE

GREEN URBANISM

Mueller brings together two of today's most important and exciting trends—New Urbanism and Green Building. This new model promotes environmental responsibility at every level.

The compact, walkable mixed-use urban village means Mueller neighbors have choices that don't involve getting in the car and polluting the air. And it means thousands of people can live in high-quality, reasonably priced neighborhoods without moving out to the edge of town and adding to suburban sprawl.

Mueller also combines Austin's homegrown Green Building Program—one of the best in the nation—with national LEED standards. Mueller's designs are resource-efficient, use non-toxic and recyclable regional materials, and help maintain and improve air and water quality. And the extensive greenspace system, along with Mueller's innovative utility systems, also help keep Mueller clean, green, and sustainable.

Mueller's unique approach is laid out in detail in the [Mueller Green Resources Guide](#), a sourcebook for all who are working to help the community meet its sustainability goals.

Zero Energy Homes Project

AUSTIN BUSINESS JOURNAL
WHERE CENTRAL TEXAS CAPITALIZES ON BUSINESS

Task force to study zero-energy homes

Austin Business Journal - 2:52 PM CDT Monday

Unsatisfied with being the official Capital of Texas and unofficial Live Music Capital of the World, the City of Austin now says it wants to be the "Clean Energy Capital" of the world.

To further that end, **Austin Energy** says the city council will create and appoint a task force Aug. 10 to study the possibility of adopting building code changes that require all new single-family homes in Austin to be "zero-energy capable" by 2015.

Zero-energy capable means a home is efficient enough to be able to power itself with on-site energy generation. This level of energy efficiency is approximately 60 percent more efficient than homes built to code today, the city-owned utility says.

"The cleanest of all energy, of course, is the energy that doesn't need to be produced," Mayor Will Wynn said in a news release announcing the initiative. "This bold step will be another example of Austin's continuing leadership role in national energy policy."

To further that end, **Austin Energy** says the city council will create and appoint a task force Aug. 10 to study the possibility of adopting building code changes that require all new single-family homes in Austin to be "zero-energy capable" by 2015.

The screenshot shows the Austin Energy website's navigation and content. At the top, there is a navigation bar with links for Customer Care, Commercial, Residential, Energy Efficiency (highlighted), and About Us. Below this is the main header 'Energy Efficiency' and a sub-header 'Programs | Tools and Tips'. A breadcrumb trail reads 'Home > Energy Efficiency > Tools And Tips > Energy Efficiency'. A search box is located in the top right. The main content area features a section titled 'Energy Savings Calculators' with a paragraph explaining that these calculators provide approximate cost savings for home energy efficiency improvements and appliances. A list of calculator categories is provided, including Air Conditioners, Room A/C (window unit), Heating System, Washer, Dryer, Refrigerator/Freezer, Lighting, Thermostat, Water Heater, and Other Household Appliances. On the right side, there is a 'Related Content' section with a list of links to various energy efficiency resources. The footer contains copyright information for 2006 Austin Energy, a Privacy Statement link, and links to the City of Austin and Contact Us pages. The Austin Energy logo is also present in the bottom right corner.

Buy Energy Star Appliances

- **Refrigerators**
- **Dishwashers**
- **Clothes Washer**
- **Air Conditioners**
- **Lighting Fixtures**
- **Ceiling Fans**

If just one in 10 homes used ENERGY STAR qualified appliances, the change would be like planting 1.7 million new acres of trees.

Install Solar Electric Panels and Water Heaters

Solar Rebate Program

One of the highest solar rebates in the U.S. at \$4.50 per watt

Example: 3kW (3,000 watts) PV system in Austin

3000w x \$6.35/watt: \$20,000

Austin Energy rebate: -\$13,500

Federal tax credit: -\$ 2,000

*Net cost: \$ 4,500
(22.5% of gross cost)*

GREEN BUILDING

Market Forecast

“...Green building will reach its “tipping point” by 2007 using conservative estimates. This is profound. As any industry crosses from being “less involved” to “more involved” it means the rest of the industry will be forced to follow and the green homes of today will become the standard homes of tomorrow.”

**Residential Green Building Smart Market Report
McGraw-Hill Construction/NAHB
September 2006**

Green Building is...

- ***...a set of principles, policies, and practices***
- ***...implemented by AE, GBP members, builders and citizens everyday***
- ***...at building, development, city, and regional scales***
- ***...that better “balance” our ecological footprint***
- ***...so that we may pass on...***

...A sustainable future

The best way to predict the future is to invent it.

Alan Kay (Inventor of OS for Apple Computers)

Rich MacMath

Rich MacMath, is a Registered Architect with a Masters degree from the University of Texas. He started his sustainable career in the 70's as the Co-founder of Sunstructures Architects in Ann Arbor, Michigan. Prior to joining Austin Energy's Green Building Program, Rich was working with the Center for Maximum Potential Building Systems as a sustainable architecture consultant for commercial, educational, and office building projects, including LEED ratings for commercial and office buildings. He has extensive experience with materials and products life-cycle analysis and database development. Rich is currently the lead Green Building Program staff member working with the City of Austin's Neighborhood Housing and Community Development Department to create an affordable, solar powered, green built subdivision in Austin.
