Storm Track for Hurricane Harvey

First Landfall as **Category 4 Hurricane** at 10PM on **Friday 25 August**

Second Landfall as **Tropical Storm** at 4 AM on **Weds 30 August**

Wednesday Thursday Friday Saturday Sunday Monday Tuesday Wednesday

Floods Are Caused by

Rainfall from sky

Hurricane Harvey

Inundation from rivers

Coastal storm surge

Hurricane Harvey – Record Precipitation

Harvey **2-day** precipitation was the **worst recorded storm** in US history

Harvey **3-day** Precipitation averaged **5 inches more** than **previous worst storms**

Harvey **5-day** Precipitation averaged **11 inches more** than **previous worst storms**

OWP OFFICE OF WATER PREDICTION

Letter from Chief Kidd to President Fenves, UT Austin

Over the last year, Dr. David Maidment and his team have provided invaluable support for groundbreaking work developing a **Texas Flood Response System** for TDEM.

Because of the catastrophic nature of this disaster, **TDEM needs additional technical support for water data on an expedited basis** and we believe Dr. Maidment's team and other personnel from the university can provide this for the state's response.

Greg Fenves
President
The University of Texas at Austin
Austin, Texas

“Doc, we need data”

President Fenves:

The Texas Division of Emergency Management (TDEM) along with more than 30 members of the Emergency Management Council, composed of other state agencies and organizations, are currently coordinating the state response to the catastrophic damages wrought by Hurricane Harvey.

Over the last year, Dr. David Maidment and his team have provided invaluable support for groundbreaking work developing a Texas Flood Response System for TDEM. Because of the catastrophic nature of this disaster, TDEM needs additional technical support for water data on an expedited basis and we believe Dr. Maidment's team and other personnel from the university can provide this for the state's response. I respectfully request that you provide any support available for Dr. Maidment and his team to assist in our current response.

Sincerely,

W. Nim Kidd, CEM @, TEM
Chief
Texas Division of Emergency Management
Assistant Director
Texas Homeland Security
Texas Department of Public Safety

All connected using WaterML data services

Hurricane Harvey and National Water Model

- **What happened?**
 - For 3-5 days duration, largest rainfall in US history
- **What did we learn?**
 - Texas Flood Response System accurately forecast spatial pattern of damage before hurricane landfall
- **Where to from here?**
 - Better connection with social media
 - “Internet of Water” for Texas
 - ***Real-time flood alert system for all of Texas***
